

ABOUT OUR COMPANY |

SERVING FINANCIAL INSTITUTIONS SINCE 1984

Headquartered in Tampa, DataComm specializes in providing high-end, low-cost solutions that improve our clients' productivity and their networks' reliability. Solutions include: IP telephony, managed intrusion-detection & prevention, penetration testing, email encryption, network consultation, outsourced network management, secure off-site backup, secure file transfer, network upgrades and cabling.

Network Design & Implementation

Our systems sales consultants have the experience to help you design the right network for your organization. Done right, you can combine your voice, data, legacy and internet requirements at each of your locations. All this can be done to help you save money, to improve performance and to allow for additional applications that offer better customer service and products to your clients.

- Virtualization (VMware, Citrix, Microsoft Hyper-V)
- Business continuity (DoubleTake, Asigra, Riverbed)
- WAN reconfiguration (MPLS, TCP/IP, Private Line, Bandwidth acceleration)
- SAN solutions (Dell EqualLogic, NetApp)
- Perimeter network defense (WatchGuard, SonicWall, Cisco, Barracuda)
- Endpoint security & encryption (Sophos, Symantec)

IP Telephony

DataComm's solution includes re-engineering the remote office network based on contemporary IP technology, improving network management, security and remote office productivity while reducing operating costs. The result will transform remote office networks from a drain on profitability to a highly productive asset.

- Unified messaging
- Call center capability
- Video conferencing
- Mobile workforce integration

WHO ARE WE?

- Over 600 financial institutions served
- Serving clients throughout the United States & Caribbean
- More ShoreTel handsets Installed In community banks than any other North American partner (65,000+ handsets & climbing)
- We continue to maintain a 99% customer satisfaction rating with both internal & outside auditing.

DataComm is a relationship driven company. We approach each challenge and opportunity with a unique level of commitment and consideration for our clients' long-term benefit.

Brian C. Boyer | President / CEO DataComm Networks, Inc

ABOUT OUR COMPANY |

SERVING FINANCIAL INSTITUTIONS SINCE 1984

Structured Cabling

DataComm's cable plant design services offer a competitive alternative when customer demand exceeds internal engineering and design capabilities. Our team of highly qualified engineers are available to conduct site analysis and design services for virtually any cabling project.

Managed Services

DataComm's experienced network engineers monitor the health and security of your network. By using advanced network management tools for monitoring servers, PCs, routers, switches, intrusion detection and prevention appliances, firewalls and IP phones, many network problems and security issues are eliminated before they can disrupt your business operations.

SecurNOC

DataComm's experienced network engineers monitor the health and security of your network. By using advanced network management tools for monitoring servers, PCs, routers, switches, many network problems and security issues are eliminated before they can disrupt your business operations. With SecurNOC you'll have the comfort of knowing that experienced network engineers are fixing potential issues before costly downtime occurs.

SecurTransfer

If you have concerns with transmitting confidential data, this service is a simple solution. Our SecurTransfer service allows users to encrypt sensitive data and transmit that data to recipients through a monitored portal.

SecurBackup

For those looking for an alternative to unreliable tape backup, SecurBackup can help. By pairing a FIPS 140-2 validated solution supports AES 256-bit encryption with an AT101 (SOC II Type II)

SecurShield

Year after year, our managed security clients pass their federal exams utilizing our 24x7 IDS/IPS monitoring and reporting service coupled with one of the highest rated IDS/IPS appliances on the market. This solution protects your network from costly breaches of your valuable data resources.

SecurMail

SecurMail provides encryption of sensitive information (account information, medical records, personal data) that is transmitted via corporate email with the use of complex lexicons.

SecurLog

DataComm's SecurLog service provides Microsoft Windows & UNIX event and security log policy management. This includes 24x7x365 log monitoring, immediate critical alert response, real-time alerting & notification, and compliance reporting.

SecurFirewall

DataComm will remotely monitor your firewall, 24x7x365, from our Secure Network Operations Center. Our technicians hold advanced vendor and security certifications that allow your institution to balance the security and operational functions of managing and maintaining your network.
