DataComm

DataComm's SecurMail service is a robust yet cost effective email encryption solution that takes the worry and burden off your in-house staff. It is a policydriven, enterprise-wide solution that provides easy-to-use, easy-to-deploy email encryption, content filtering, and management of outbound (and inbound) messages.

Our SecurMail service includes a Personal Financial Content Recognition lexicon that identifies email messages containing GLBAmandated customer financial information such as social security, credit card, account numbers, balance transfers, refinance data, and other personal financial details.

Highlights
FFIEC regulators, including the FDIC, OTS, OCC and NCUA use ZixCorp to secure their email. The CSBS has named ZixCorp's email encryption service as a proven solution and now 21 state banking regulators use ZixCorp. ZixCorp has over 700 financial institutions as customers. When financial institutions use ZixCorp's email encryption service they get seamless, secure email communications with their partners and customers, many who are members of the ZixDirectory. That means instant and secure communications with your federal regulators.

Zix, the leader in hosted services for email encryption supports more than 12 million email encryption members, with an accelerated growth rate of 80,000 members per week. The ZixDirectory is the largest email encryption directory in the world, interconnecting a network of communities that use Zix's email encryption service to securely send and receive email. States continue to introduce security legislation to help protect consumer privacy. ZixCorp helps protect this data with email encryption solutions that also help you benefit from risk management, security best practices, reduced liability, avoidance of fines and bad publicity, and retained customer loyalty.

DataComm's new securMAIL encryption service provides a proven trust model for secure email communication. securMAIL is a policy-driven, enterprise-wide solution that provides easy-to-use, easy-to-deploy email encryption, content filtering, and management of outbound (and inbound) ...

SecurMail | Email Encryption
...messages. Our securMAIL service includes a personal financial content recognition lexicon that identifies email messages containing GLBA-mandated customer financial information include social security numbers, credit card numbers, account numbers, balance transfers, refinance data, and other personal financial details. The solution can be configured to block or encrypt these sensitive emails according to your specific policies. Our solution takes little time to deploy and requires little to no administration on your part. securMAIL operates independently of existing email systems and is transparent to end users. Secure messages can be sent to ANYONE with an email address, whether they use Zix or not. DataComm's securMAIL User Awareness Program (provided with any version of our add-on securMAIL ZixPort options) provides organizations with the tools they need to communicate email security decisions and policies to customers, employees, and business partners. The program provides materials to educate and motivate employees to use secure email to its fullest and to explain the benefits of secure e-messaging to customers. The User Awareness Program helps make understanding encryption easy and economical with co-branded websites, quick start guides, and internal policy letters to help you "spread the word".

Optional Considerations
Beyond our basic email encryption solution, you can enhance your SecurMAIL experience and presentation with our optional securMAIL ZixPort Secure Messaging Portal. ZixPort comes in two flavors – compose, and non-compose. When an encrypted email is delivered via ZixPort, the user receives a notification email that links to the secure message portal. After logging in, the user can view their message and any attachments over a secure SSL connection. SecurMAIL ZixPort is branded to match the look and feel of your corporate website and configured to meet your communications needs. It lets anyone securely read and reply to encrypted emails you send. With the compose option, you can setup two-way communications with customers. Also, your customers can initiate an encrypted email conversation with you via your website. You can add a "Contact Us" button on your site that allows them to securely contact you even if they don't have email encryption capabilities themselves. A great feature when dealing with your loan opportunities or large personal or commercial clients.

SERVICE BENEFITS

- ✔ Ability to send secure email to anyone
- ✔ Built-in content scanning
- ✔ Quick deployment in less than a day
- ✔ No training for end users
- ✔ No software to install and no additional resources needed
